LEADER IN FIBERGLASS POLES

**THE ORIGINAL AND
STILL THE BEST**

THE ORIGINAL FIBERGLASS POLE INTRODUCED IN 1956

Jameson introduced the first fiberglass lay-up sticks in 1956 to meet the needs of telecommunication linemen.

The strength and durability of fiberglass proved indispensable when lifting leak detection equipment overhead and soon replaced wooden poles as the industry standard.

Today, Jameson poles are available in a variety of configurations with tools and accessories to serve telecommunication linemen, professional arborists and landscapers.

By consistently providing the highest quality fiberglass poles, Jameson remains the professional's choice for line clearance and tree care.

PUTTING IT TOGETHER Customize Poles & Accessories

- 1 Choose your tool head (pruner, pole saw or accessory)
- 2 Attach tool head to pole's female ferrule with adapter
- 3 For additional length, attach extension pole(s)

For highest performance and safety, Jameson recommends using a Base Pole when using one pole or starting with a Base Pole when working with multiple poles.

POLE CONFIGURATIONS

Base Pole - Jameson recommends starting with Base Pole

Extension Pole provides additional length, extending workable height.

Saw Head Pole is for use with Saw Blade.

ADAPTER & FERRULE SYSTEM

Makes it easy to change from pruner head to pole saw head or pole lengths of 4' to 12'. An exterior leaf spring locking button on ferrule offers a strong connection, whether attaching poles or tool heads.

This versatility saves time and money in the field.

SAW HEAD POLE SET UP

Use saw blade with Saw Head Pole or use Pole Saw Head (page 11) with Extension Pole.

Jameson recommends using Saw Head Poles with Base Poles

JE FOAM CORE POLES

- High visibility safety yellow color
- Meets requirements of OSHA Subpart R 1910.269(j)(1)(i):

DOUBLE LOCK™ TELESCOPING POLES

Saves Space - Adjustable Height

Telescoping Poles are constructed from lightweight fiberglass and offer a space-saving design. The Double Lock system keeps the telescoping pole from collapsing and gives you a secure connection, no matter what the length.

- Double locks (internal lock and external cap) ensure poles will not collapse. Count on a secure connection at any length for maximum versatility and safety.
- Preferred choice for arborist, home owners and landscapers.
- Lightweight, durable fiberglass will not crimp under high stress like aluminum poles.
- Compact for easier climbing and storage.

Not A "Hot Stick" - Not For Use On Energized Lines

For safety, Jameson does not recommend attaching additional poles or Tru Shot to Telescoping Poles.

TREE CARE TOOLS

**COMPOSITLOCK™
FIBERGLASS POLES**

COMPOSITLOCK™ Poles maintain insulating properties across pole sections for line-clearance tree work PLUS offer more secure pole connection for telecommunication, line clearance, arborist and landscape professionals.

INCREASED SAFETY WHEN WORKING AROUND ENERGIZED LINES

Responding in part to the TCIA EHAP® Program and NRECA Commitment to Zero Contacts initiative, Jameson's CompositLock™ Fiberglass Poles seek to reduce the potential for conductivity.

STRONG, SECURE CONNECTIONS BETWEEN POLE SECTIONS

Over-sized thread profile provides strong, secure connections, eliminating loose fit or "slop" required with traditional aluminum ferrules. The result is less binding, easy cleaning, and improved rigidity the entire working length of the pole.

SMOOTH FERRULE PROFILE

Sunken rivets and threaded attachment result in a smooth profile that moves easily in foliage without snagging
